

Linear drives DGP/DGPL

# Linear drives DGP/DGPL

Selection aid

FESTO

## General information

- Compact, fitting length relative to stroke
- Highly adaptable, thanks to wide choice of mounting and attachment options
- Adjustable end-position cushioning systems
- Can be combined with the modular system for handling and assembly technology
- Maintenance-free (for up to 5000 km with a recirculating ball bearing guide)
- Wide choice of variants:
  - Clamping unit
  - Extended slide
  - Air connections on both sides
  - Electronic cushioning with SoftStop SPC11

## Basic design DGP

- Piston  $\varnothing$  18 ... 80 mm
- Stroke lengths 10 ... 3000 mm
- As a drive for external guides
- For small loads

## With plain-bearing guide DGPL-GF-GK/-GV

- Piston  $\varnothing$  18 ... 80 mm
- Stroke lengths 10 ... 3000 mm
- Minimal backlash
- For medium loads and low torques

## With recirculating ball bearing guide DGPL-KF-GK/-GV

- Piston  $\varnothing$  18 ... 80 mm
- Stroke lengths 10 ... 3000 mm
- Backlash-free
- Precision, rigid guide
- For high loads and torques

## Protected version DGPL-GA

- Piston  $\varnothing$  18 ... 40 mm
- Stroke lengths 10 ... 2000 mm
- Guide and slide are fitted with a cover to protect against the ingress of particles from above and from the side
- Backlash-free
- Precision, rigid guide
- For high loads and torques

## With heavy-duty guide DGPL-HD

- Piston  $\varnothing$  18 ... 40 mm
- Stroke lengths 10 ... 2160 mm
- Backlash-free
- Maximum precision

Key features

FESTO

## The technology in detail

- 1 Adjustable end-position cushioning, alternatively:
  - Shock absorber
  - SoftStop SPC11
- 2 Slide is permanently attached to the driver

- 3 Cover strip protects the drive against the ingress of dirt
- 4 Choice of supply port positions, options on three sides on the end cap

- 5 Piston
- 6 Mounting/sensor slot for integral proximity sensors, additional slot for slot nuts with piston  $\varnothing$  32 and above
- 7 Stable profile

# Linear drives DGP/DGPL

Key features

System product for handling and assembly technology

System components and accessories		
	Brief description	→ Page/Internet
1	Linear drives	Wide range of combination options within handling and assembly technology drive
2	Grippers	Wide range of combination options within handling and assembly technology gripper
3	Adapters	For combining drives with drives and drives with grippers adapter kit
4	Basic components	Profiles and profile connectors as well as profile/drive connectors basic component
5	Installation components	For achieving a clear-cut, safe layout for electrical cables and tubing installation component
-	Axes	Wide range of combination options within handling and assembly technology axes
-	Motors	Servo and stepper motors, with or without gearing motor

## Characteristic load values

The indicated forces and torques refer to the centre line of the internal diameter of the profile barrel. They must not be exceeded in the dynamic range. Special attention must be paid to the cushioning phase.

If the drive is subjected to more than two of the indicated forces and torques simultaneously, the following equations must be satisfied in addition to the indicated maximum loads:

$$0.4 \times \frac{Fz}{Fz_{max.}} + \frac{Mx}{Mx_{max.}} + \frac{My}{My_{max.}} + 0.2 \times \frac{Mz}{Mz_{max.}} \leq 1$$

$$\frac{Fz}{Fz_{max.}} \leq 1 \quad \frac{Mz}{Mz_{max.}} \leq 1$$

Permissible forces and torques								
Piston Ø		18	25	32	40	50	63	80
Standard driver GK								
Fy <sub>max.</sub>	[N]	-						
Fz <sub>max.</sub>	[N]	120	330	480	800	1200	1600	5000

# Linear drives DGP

Technical data

## Operating range of the integrated end-position cushioning PPV

Maximum permissible speed  $v$  as a function of the moving load  $m$

-  Note  
 The data applies to a horizontal mounting position, applied load on top.  
  
 $m$  = Applied load + moving load  
 (→ 10)  
 The graph opposite refers to  $r_{max}$ .

### Pneumatic linear drives

The end-position cushioning must be adjusted to ensure jerk-free operation. If the operating conditions are outside the permissible range, the load to be moved must be externally

cushioned using suitable equipment (shock absorbers, stops, etc), preferably at the centre of gravity of the mass.

### with driver DGP

$r_{max} = 20$  mm  
 for piston  $\varnothing 18$  mm

$r_{max} = 50$  mm  
 for piston  $\varnothing 25 \dots 80$  mm  
 (data for greater load distances on request)

## Maximum permissible support span $l$ as a function of the force $F$

The axis may need to be supported with central supports MUP in order to restrict deflection with long stroke

lengths. The following diagrams serve to determine the maximum permissible support span  $l$  as a

function of the force  $F$  acting upon the axis.

### Force on the surface of the slide

### Piston $\varnothing 18 \dots 40$

Technical data

## Characteristic load values for drive with plain-bearing guide GF

The indicated forces and torques refer to the centre of the guide rail. They must not be exceeded in the dynamic range. Special attention must be paid to the cushioning phase.

If the drive is subjected to more than two of the indicated forces and torques simultaneously, the following equations must be satisfied in addition to the indicated maximum loads:

$$\frac{F_y}{F_{y_{max}}} + \frac{F_z}{F_{z_{max}}} + \frac{M_x}{M_{x_{max}}} + \frac{M_y}{M_{y_{max}}} + \frac{M_z}{M_{z_{max}}} \leq 1$$

Note

All values for the GF version refer to a speed of 0.2 m/s.

 - Note  
The values for standard slide GK and piston Ø 18 ... 40 apply to variant GA.

# Linear drives DGPL, with guide

Technical data – Plain-bearing guide

## Maximum permissible static and dynamic characteristic load values

### Standard slide and plain-bearing guide DGPL-...-GF-GK-S

The pneumatic linear drive with plain-bearing guide DGPL-...-GF is designed for a maximum speed of 1 m/s. At higher speeds and vertical application, it is recommended that

pneumatic linear drives with recirculating ball bearing guide DGPL-...-KF are used as an alternative.

## Maximum permissible speed $v$ as a function of the force $F$

## Maximum permissible speed $v$ as a function of the permissible torque $M$

# Linear drives DGPL, with guide

Technical data – Plain-bearing guide

## Maximum permissible static and dynamic characteristic load values

### Extended slide and plain-bearing guide DGPL-...-GF-GV-S

The pneumatic linear drive with plain-bearing guide DGPL-...-GF is designed for a maximum speed of 1 m/s. At higher speeds and vertical application, it is recommended that

pneumatic linear drives with recirculating ball bearing guide DGPL-...-KF are used as an alternative.

## Maximum permissible speed in m/s as a function of the force F

## Maximum permissible speed in m/s as a function of the permissible torque M

# Linear drives DGPL, with guide

Technical data

## Operating range of the integrated end-position cushioning PPV

Maximum permissible speed  $v$  as a function of the moving load  $M$

Note

The data applies to a horizontal mounting position, applied load on top.

$m$  = Applied load + moving load  
→ 29

The graph opposite refers to  $r_{max}$ .

### Pneumatic linear drives

The end-position cushioning must be adjusted to ensure jerk-free operation. If the operating conditions are outside the permissible range, the load to be moved must be externally cushioned using suitable equipment (shock absorbers, stops, etc), preferably at the centre of gravity of the mass.

### with slide DGPL

$r_{max} = 20$  mm  
for piston  $\varnothing 18$  mm

$r_{max} = 50$  mm  
for piston  $\varnothing 25 \dots 80$  mm  
(data for greater load distances on request)

- - Note

Evenness of applied loads on pneumatic linear drives with slide DGPL: To avoid distortion or loosening of the guide elements, the

bearing surface of the assembly must maintain a flatness of at least 0.03 mm.

# Linear drives DGPL, with guide

Technical data

## Maximum permissible support span $l$ as a function of the force $F$

The axis may need to be supported with central supports MUP in order to restrict deflection with long stroke lengths. The following diagrams serve to determine the maximum permissible support span  $l$  as a function of the force  $F$  acting upon the axis.

### Force on the surface of the slide

### Piston $\varnothing 18 \dots 40$

### Piston $\varnothing 50 \dots 80$

3	Slide	Anodised aluminium
4	Guide rail	Steel
-	Seals	Nitrile rubber, polyurethane

## Characteristic load values for drive with heavy-duty guide HD

The indicated forces and torques refer to the centre of the heavy-duty guide. They must not be exceeded in the dynamic range. Special attention must be paid to the cushioning phase.

If the drive is subjected to more than two of the indicated forces and torques simultaneously, the following equations must be satisfied in addition to the indicated maximum loads:

$$\frac{F_y}{F_{y_{max}}} + \frac{F_z}{F_{z_{max}}} + \frac{M_x}{M_{x_{max}}} + \frac{M_y}{M_{y_{max}}} + \frac{M_z}{M_{z_{max}}} \leq 1$$

Permissible forces and torques				
Piston Ø		HD-18	HD25	HD-40
F <sub>y</sub> <sub>max.</sub>	[N]	1820	5400	5400
F <sub>z</sub> <sub>max.</sub>	[N]	1820	5600	5600
M <sub>x</sub> <sub>max.</sub>	[Nm]	70	260	375
M <sub>y</sub> <sub>max.</sub>	[Nm]	115	415	560
M <sub>z</sub> <sub>max.</sub>	[Nm]	112	400	540

# Linear drives DGPL-HD, with heavy-duty guide

Technical data

## Maximum permissible support span $l$ as a function of the force $F$

The axis may need to be supported with central supports MUP in order to restrict deflection with long stroke lengths. The following diagrams serve to determine the maximum permissible support span  $l$  as a function of the force  $F$  acting upon the axis.

## Force on the surface of the slide

## Shock absorber retainer KYP

for DGPL  
(order code C)

Material:

Retainer: Aluminium  
Sleeve: Corrosion resistant steel

Shock absorber not included in scope of delivery.

1 Shock absorber retainer KYP  
(if the retainer is in contact with the end cap, i.e. cap serves to secure position, the entire stroke length can be utilised)

2 Shock absorber YSR-...-C

3 Position retainer  
(included in scope of delivery) either behind or underneath the shock absorber retainer KYP

## Shock absorber DG-GA

in end position

for DGPL

protected version GA

(order code E)

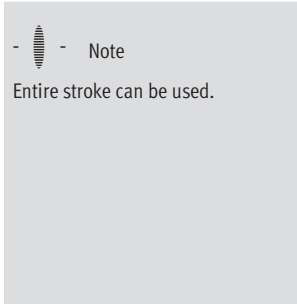

Material:

Housing: galvanised steel; piston rod:

high-alloy steel,

seals: nitrile rubber, polyurethane

Free of copper, PTFE and silicone

Entire stroke can be used.

Ordering data			
For Ø	Weight [g]	Part No.	Type

## Shock absorber kit YHD

for heavy-duty guide

(order code D)

Material:

Housing: Galvanised steel

Seals: TPE-U(PU) NBR

Free of copper, PTFE and silicone
