F I B E R O P T I C & L E D L I G H T I N G

THROUGH INNOVATIVE CONCEPTS IN OUR LIGHTING PRODUCTS, SUPER VISION® INTERNATIONAL HAS MADE LIGHT A PRODUCT THAT HAS NO BOUNDARIES. OUR CLIENTS USE OUR FIBER OPTIC AND LED LIGHTING SYSTEMS TO PROMOTE, SELL, AND EXPRESS.

AS ONE OF THE WORLD'S LEADING MANUFACTURERS OF LED AND FIBER OPTIC LIGHTING SYSTEMS, SUPER VISION'S® GOAL IS TO PROVIDE QUALITY PRODUCTS THAT CREATE AN EFFECT THAT YOU AND YOUR CLIENTS ENVISION.

USING LIGHT, COLOR AND IMAGINATION, THE POSSIBILITIES ARE ENDLESS.

IN THIS CATALOG WE INVITE YOU TO UNDERSTAND OUR PRODUCTS IN DETAIL, SEE THEIR APPLICATIONS AND EFFECTS, AND PICTURE WHAT OUR LIGHTING SYSTEMS CAN DO FOR YOU.

ENJOY.

### LIGHT BASICS

**Light** – The part spectrum of electromagnetic radiation that the human eye perceives as brightness. This area of radiation is between 360 and 830nm (nanometers). This is only a small fraction of the electromagnetic radiation spectrum.

**Luminous Flux** – A unit of measure: lumen [lm]. All of the radiated power emitted by a light source and perceived by the human eye.

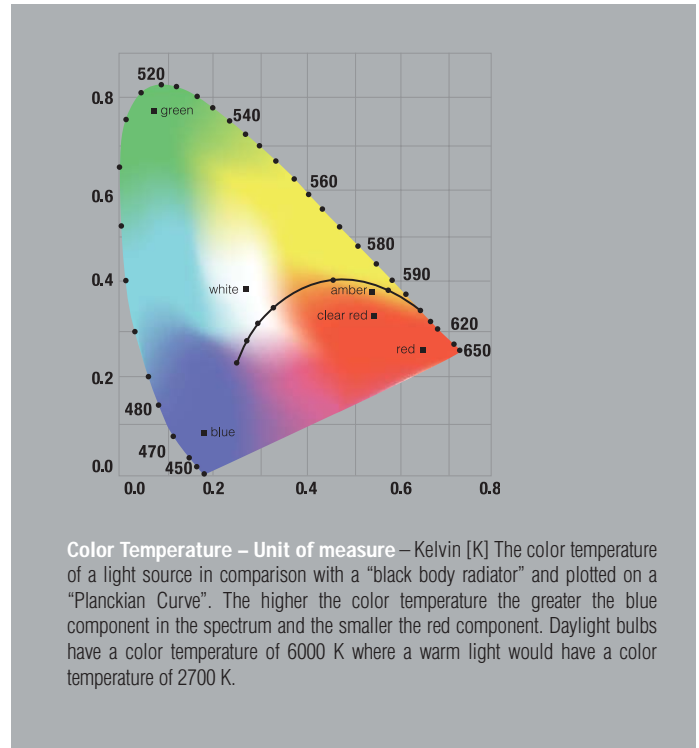

**Luminous Intensity** – Luminous intensity is a unit measure of the luminous flux in a solid angle.

**Luminous Efficiency** – Unit of measure: Lumens per watt [lm/W]. indicates the efficiency with which the power consumed is converted to light.

**Light Color** – The light color of a lamp can be defined in terms of color temperature:

- Warm: Less than 3300 K
- Intermediate: 3300 to 5000 K
- Daylight: Greater than 5000 K

**Color Rendering** – Lamps may have the same color temperature but different color rendering properties due to the spectral composition of their light. Certain colors of the spectrum are transmitted and appear to the human eye to be brighter than others; e.g., yellow appears much brighter than red to most of us.

### FIBER OPTIC LIGHTING BASIC TERMS

**SideGlow®** – trade marked term for Super Vision® side emitting fiber optic cable.

**EndGlow®** – trade marked term for Super Vision® end-emitting fiber optic cable.

**EndPoint** – a term for fiber optics in single strand.

**Illuminator** – the unit that houses the lamp that illuminates the fiber optic.

**Color Wheel** – A dichroic glass or plastic filter inside the illuminator for color changing effects. It is connected to a motor that turns the wheel.

**Fiber-Head** – The device that holds the fibers in position at the illuminator.

**Fiber Port** – The connection point on the illuminator for the fiber-head.

**Loop** – Refers to the configuration of SideGlow® cable where both ends of the cable terminate into an illuminator. This way light is projected from both ends for maximum brightness

**Dead-End Run** – Refers to a layout for SideGlow® cable where only one end terminates an illuminator. Only recommended for SideGlow® cable runs under 30 feet or 10 meters.

**Light Outlet** – the termination fixture at the opposite end of the fiberhead.

**Hot Knife** – A tool used to cut the fiber at the fiberhead and light outlets. The heat from the knife produces a smooth surface across the ends of the fiber as well as the proper angle of acceptance for the light to enter or exit the fiber.

### LED FACTS

**LED** – (Light Emitting Diode) A Light Emitting Diode is a semiconducting device that emits light when an electric current runs through it. It uses significantly less power, releases less heat, and lasts much longer than incandescent light bulbs.

**Diode** - Diodes only let current (electricity) to flow in one direction and not the other. LEDs are diodes too, but they are producing light when electricity flows through them.

LEDs are illuminated solely by the movement of electrons in a semiconductor material, and they last just as long as a standard transistor.

LEDs are made with two different kinds of semiconductor material. One type that has too many free electrons roaming around inside, and another that doesn't have enough. When an electron from one material gets pushed across a thin barrier and gets into tiny spaces in the other a photon or particle of light is produced.

**LED Color:**

The color of light depends on a number of factors, including the type of material they make the LED with and the material's quantum bandgap.

**Bandgap** – is how much energy each electron needs in order to cross the barrier.

**Small Bandgap** – where fairly weak electrons can cross gives you infrared or red light, while a larger bandgap that needs really strong electrons gives you light that has a blue or violet color to it.

FIBER OPTIC LIGHTING SYSTEMS OFFER UNIQUE DESIGN FLEXIBILITY. THE SAFETY ASPECT OF NO HEAT OR ELECTRICITY IN THE LIT CABLE PROVIDES DESIGN AND INSTALLATION OPPORTUNITIES NOT AVAILABLE WITH TRADITIONAL LIGHTING. IN MANY CASES, VERY SMALL FIXTURES CAN BE INSTALLED IN AREAS NOT ACCESSIBLE BY STANDARD LIGHTING FIXTURES. SUPER VISION®'S CABLES CAN BE INSTALLED INDOORS, OUTDOORS, UNDERWATER OR IN CONCRETE, AND DECORATIVE FIXTURES ADD A CREATIVE FLAIR TO THE VERSATILITY OF FIBER OPTIC LIGHTING.

**A) Linear Runs:** When a run of cable requires more than one illuminator, space the illuminators evenly to assure an evenly lit run.

**B) Source Isolation:** A term used to describe the illuminator when it is hidden or mounted away from the lighted path of the fiber optics, as behind a wall. The remote mounting of an illuminator can reduce noise pollution from the fan and/or stepper motor option, it also allows for ventilation of the power source.

**C) Ambient Light:** Always take note of existing or potential ambient light that may fall on the visible run of the fiber optics. As ambient light tends to "wash out" colors, use white light in high ambient light conditions.

**D) Bend Radius:** A 1 1/2" bend radius will allow for even color intensity. A tighter radius may cause a bright spot. Multiple tight bends may cause a dim linear run.

**E) Fiber Head Capacity:** The fiberhead holds the fibers in position at the illuminator. The maximum number of individual strands varies depending on the illuminator and fiber size. SideGlow® fiber is available with 42, 84 or 126 strands, and in most cases both ends of the fiber cable will need to terminate at the illuminator. Reducers inserted into the back of the fiber head will hold the fibers if a smaller number of fibers than the minimum allowed are used.

**F) Location Listing:** Super Vision®'s illuminators are all UL, cUL and CE listed for dry and wet locations. The fiber optic cable may be used either indoors or outdoors and is UV protected, as well as algacide and fungicide treated.

**G) SideGlow® Cable Length:** SideGlow® cable's maximum recommended length is 100 feet (30 meters), with both ends terminating at an illuminator.

**H) EndGlow® Runs:** EndGlow® runs can stretch as far as 100 feet (30 meters). For distances over 40 feet (12 meters), multiple fixtures should be used with the same cable length to maintain a consistent light output.

## INSTALLATION

1. Dimensions are critical. Length cannot be added once the cable is cut.
2. Make sure there is adequate ventilation for the illuminator. Check local building codes, and the specifications for each illuminator.
3. Light colored surfaces are desirable for mounting the cable. However, dark backgrounds provide good contrast where there are high ambient light levels.
4. If there are multiple illuminators that require synchronization, remember to provide access for control cable wiring between the illuminators.
5. Typically under normal circumstances, 60 feet of SideGlow® cable can be installed per hour.

Underwriters Laboratories Inc. (UL) is an independent, not-for-profit product safety testing and certification organization. They have tested products for public safety for more than a century. Each year, more than 17 billion UL Marks are applied to products worldwide.

An electrical, mechanical or electro-mechanical product bearing the North American ETL Listed mark signifies that it was tested and meets the minimum requirements of prescribed product safety standards. Moreover, the mark indicates that the manufacturer's production site conforms to a range of compliance measures and is subject to periodic follow-up inspections to verify continued conformance.

The CE mark is a mandatory European marking for certain product groups to indicate conformity with the essential health and safety requirements set out in European Directives. The letters 'CE' are an abbreviation of Conformité Européenne, French for European Conformity.

# F I B E R O P T I C C A B L E S

### What is Fiber Optic Cable?

There are two types of Super Vision® cable: SideGlow® and EndGlow®.

Patented SideGlow® cable is a side [light] emitting cable composed of several individual strands of PMMA acrylic fibers (also referred to as “plastic fiber optic” ) covered by a clear PVC coating. SideGlow® is available in a wide range of diameters and in several models. The fiber strands inside the cable are twisted around a reflective center core.

EndGlow® cable is an end [light] emitting cable that uses the same PMMA acrylic strands as SideGlow® except it's straight fiber strands are covered in an opaque black or white PVC jacket.

EndPoint fiber is the “raw” fiber sold in individual strands by the spool. Light emits primarily from the end, however light can be observed emitting from the side as well. Super Vision® offers many fixtures or light outlets that attach to the end of the cable providing both a mounting system for the cable fixture and a decorative or functional lighting system.

### Why use Fiber Optic Cable?

Fiber optic cable is an excellent alternative to neon and other traditional lighting products but without any electricity in the cable itself. By using a color filter or color wheel in the illuminator, the cable, fiber ends or fixtures can change color. The cable emits little or no heat making it ideal for applications where electricity / heat is a concern such as wine racks, display cases, and in or around water. Fiber optic cable is energy efficient.

### Where can I use Fiber Optic Cable?

Just about anywhere you like. Because there is little or no heat in the cable and no electricity, your options are wide open. The outer jacket of the cable has UV inhibitors, algacides, and fungicides to further protect it in the environment.

### When do I use Fiber Optic Cable?

When you require a safe and energy efficient lighting system that has the ability to change color and is able to fit in an area that a traditional lighting system cannot fit. It can be used for signs, building outlines, cove lighting, to illuminate architectural fixtures, swimming pool perimeters, underwater lighting, landscape lighting and so on.

### Who uses Fiber Optic Cable?

The Pepsi Globe in Caracas, Venezuela uses over 7 kilometers of the SideGlow® cable. Major theme parks, corporations, sign companies and homeowners who illuminate their pools all use fiber optic lighting. Once you discover the magical world of fiber optics, you'll begin to see it almost everywhere. Super Vision® has over 60 worldwide distributors, so no matter where you are in the world chances are Super Vision® is there. ■

S I D E G L O W ®

Frank Lloyd Wright Pool Design

### SideGlow® cable

SideGlow® cable is a safe alternative to neon. It can change colors, is virtually unbreakable and is energy efficient. Suitable for interior and exterior applications, it is UV protected and has an algacide and fungicide treated exterior jacket for maximum durability against the elements. SideGlow® cable is strong enough for amusement park rides, extreme cold weather as well as underwater applications. With no heat or electricity in the cable, typical lighting design restrictions are eliminated, creating a multitude of design possibilities.

The SideGlow® cable is made up of .030"/ 0.75mm diameter PMMA acrylic optical fibers twisted (SV42, SV84, SV126 only) within a flexible clear jacket. The fibers are twisted around a highly reflective PVC internal core that offers flexible stability with maximum light output.

P-Clips or U-Channel Track: Allow for maximum versatility and flexibility in mounting. ■

The cable diameter is determined by fiber quantity:

- 14 fibers: .187", 4.8mm
- 32 fibers: .312", 7.9mm
- 42 fibers: .375", 9.5mm
- 84 fibers: .5", 12.7mm
- 126 fibers: .625", 15.9mm

### Ultra SideGlow® cable

The Ultra SideGlow® cable has the same features as standard SideGlow® cables, with the exception of 25% larger diameter individual fibers. The Ultra SideGlow® cable is made up of .040"/ 1.0mm diameter PMMA acrylic optical fibers protected within a flexible PVC jacket. The fibers are twisted around a highly reflective white PVC center core that offers flexible stability with maximum light output. The result is the brightest SideGlow® cable available in the industry today!

P-Clips or Track tubing can also be used in mounting the Ultra SideGlow® cable.

The cable diameter is determined by fiber quantity:

42 fibers: .5"/ 12.7mm

84 fibers: .625"/ 15.9mm

**EndGlow® cable**

EndGlow® cable is multi-strand fibers protected in a flexible PVC jacket for ease of handling and fiber protection. EndGlow® cable is ideal for use with architectural lighting fixtures, landscape fixtures, water-tight lenses, feature lights and EndGlow® signage.

Note: When ordering cable, specify length by quantity in terms of feet. Spools are established lengths and will not be cut shorter; if specific lengths are required, order each individual cable cut to length. SV150EG, SV225EG, SV300EG, SV100EG, SV150EGW, SV225EGW, and SV300EGW are not available in 1000' spool lengths.

Cable Construction

.030" diameter untwisted PMMA acrylic optical fibers within a flexible PVC jacket.

Diameters are based on fiber quantity:

4 fibers:	.125"	3.2mm

END POINT

ORLANDO, FLORIDA

### EndPoint Fiber

EndPoint fiber is offered on a spool as an individual strand. This is the most economical way to purchase fiber optics. However, caution must be exercised when handling these individual fibers as they do not have a protective PVC jacket.

The most common use for individual spools are for EndPoint applications such as starfield ceilings, endpoint signs and displays.

Larger and smaller diameter fibers are available other than in EndGlow® or SideGlow® products.

EndPoint fibers are single-strand PMMA acrylic optical fibers, available in a wide range of diameters for a variety of applications. Endpoint fibers are ideal for starfield ceilings, point-of-purchase displays, floor tiles, wallscapes and spectacular displays.

# P - CLIPS &

# T R A C K S

Super Vision®'s "P" clips are clear PVC for mounting fiber optic cable where a tight radius is required for free form designs or when track is inappropriate.

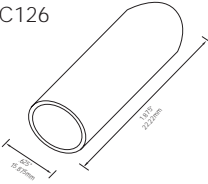

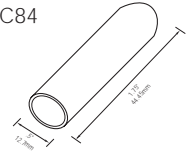

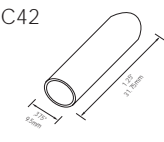

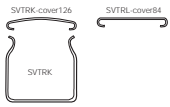

Clear caps for termination of dead end runs of SideGlow® cable.

Super Vision®'s SVTRK fiber optic cable mounting U-channel is a clear, rigid plastic used to mount fiber optic cable. It is easily cut or notched for bending and can accommodate a slight radius. It is available in 6-foot sections and can be cut to length.

Super Vision®'s SVTRK-WHITE fiber optic cable mounting U-channel is a white, rigid plastic used to mount fiber optic cable for front-only viewing. It is easily cut or notched for bending and can accommodate a slight radius. It is available in 6-foot sections and can be cut to length. Covers are clear.

# ILLUMINATORS

**What is an Illuminator?**

Often referred to as the light engine, light pump, light source and even transformer, the illuminator houses the lamp that provides the light for the fiber optics. The fiber is connected to the illuminator via a fiberhead. On some models a color filter or color wheel with many different color filters is positioned in between the fiberhead and the lamp. The color wheel is connected to a motor that will turn and change the color at a pre-determined rate. For special effects a DMX system can be integrated with some of the illuminators to provide fast paced effects as well as dowsing. Dowsing is the stopping of light transmission through an opaque filter.

If you have more than one illuminator and you want the colors to change at the same time on all of the units then you need a synchronous controller. Super Vision® manufactures two synchronous controllers: the SV300C is an internal system that can synchronize up to ten illuminators and the SV600C can sync up to 35 illuminators

*\* With a booster ( an extra SV600C ) an application can handle data cable lengths of 2000 feet, or another 35 illuminators, whichever happens first.*

**Which Illuminator Do I Use?**

The first question to ask is what is the application. For SideGlow® cable used for cove lighting, building outlines or as a neon alternative you'll need to use a metal halide illuminator - either the SV1500, FIBERPRO, SV150T or the ECLIPSE II. For the EndGlow® architectural fixtures either the SV1500 (interior) or the FIBERPRO 150 (interior/exterior), both are 150 watt metal halide units.

For star ceilings or Endpoint fiber optic displays choose the SV750 (75 watt halogen) or for very bright results the STARPRO (70 watt metal halide) will be a superb choice.

If you have an outdoor application where the illuminator needs to be mounted on or close to the ground the SV150T tower will provide you a solution. It is a 150 watt metal halide system that is popular with landscapers and pool builders.

Use the charts to the right to choose your illuminator. ILLUMINATOR FEATURE CHART

The SV750 series illuminator provides 75 watts of incandescent quartz halogen illumination for EndGlow® and SideGlow® applications. Its compact housing fits well into confined spaces and features an optical color wheel for dramatic effects. The SV750 is rated for indoor applications only. Its easy-access door panel allows for easy re-lamping and fast installation and maintenance. UL listed for dry location.

#### SVISOT6C Data Cable

Part No.: 17.0609

Description: data cable for controlled tower unit. Sold per foot.

The SV300C is designed as an economical alternative to the SV600C for small to medium applications, involving 1 to 10 synchronous illuminators. It's purpose is to keep those illuminators in constant synchronous operation. The unit is UL, cUL and CE approved, and is designed to work with 120VAC, 60Hz and 220-240 VAC, 50Hz illuminators. The SV300C can be added internally to the SV1500, FIBERPRO, and ECLIPSE II to make them into a Master illuminator. Note: Master Module not sold separately.

### INTERNAL WIRING DIAGRAM FOR 120V, 60HZ

### INTERNAL WIRING DIAGRAM FOR 220-240V, 50HZ

SV300C	DESCRIPTION	CARTON QTY
SV300C	Synchronous control system	1 each
SVCC10	Data cable for SV300C	Per foot

### SPECIFICATIONS:

#### Electrical Rating:

- 120 VAC, 60 Hz
- 220 VAC, 50 Hz

#### Dimensions:

- 4.0" x 2.05" x 1.6"
- 102mm x 52mm x 41mm

#### Construction:

- Plastic

#### Location Listing:

- Indoor/outdoor within L.S.

#### Maximum Number Illuminators:

- 10

#### Wire Type:

- 600V, type TC control cable
- 18 AWG, 2 conductor
- Vinyl nylon tray cable
- UV resistant, suitable for direct burial

**External Master**

The SV600C Master Control System unit is designed to synchronize the color wheel rotation between two or more illuminators. The SV600C is an external unit separate from the illuminator. It can only be used with illuminators that have an internal slave control and sensor. The SV600C is parallel wired to each illuminator. The SV600C can be used with the SV1500, FIBERPRO, and ECLIPSE II.

**Features:** Color change interval duration can be set to: 1, 2, 4, 8, 16, 32, 64, or 128 minutes or seconds.

600C	DESCRIPTION	CARTON QTY
SV600C	Synchronous control system	1 each
SVCC10	Data cable for SV600C	Per foot

**SPECIFICATIONS:**

**Electrical Rating:**

- 120 VAC, 60 Hz
- 220 VAC, 50 Hz

**Dimensions:**

- 3.21" (81.5mm) x 4.92" (125mm) x 7.67" (195mm)

**Construction:**

- Plastic

**Location Listing:**

- Indoor/outdoor

**Maximum Number Illuminators:**

- 35

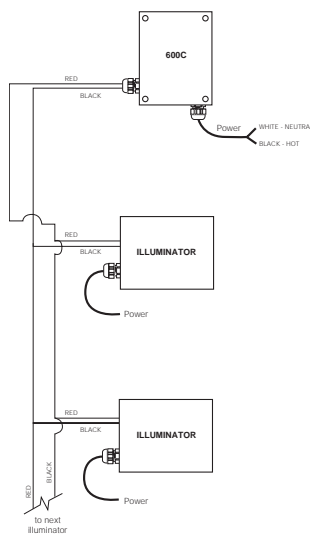

**Wire Type:**

- 600 V, type TC control cable
- 18 AWG, 2 conductor
- Vinyl nylon tray cable
- UV resistant, suitable for direct burial

**Standards:**

- UL / cUL

**IP Rating: 23**

The SV600C has the following operating parameters:

- Modes:**
- Four or eight color wheel
  - Stop at each color (4 color only)
  - Stop at "Home" only (see above figure)
  - Minute or second settings
- Dwell:**
- Sets the time the color wheel will remain on each color (for 4 color wheels only) or at the "Home" position. Home Position is where the magnet on the color wheel is aligned with the sensor.

The DMX Machine controller is a complete stand-alone lighting controller. It is ideal as a slave to another controller, or can be used by itself for small shows or elaborate kiosks. For use in FIBERPRO or ECLIPSE II illuminators.

CF-1/4W-121JTR	Terminating Resistor 120 Ohm
10.0651	Replacement DMX Stepper Motor 6-wire
10.0650	DMX board

### SPECIFICATIONS:

#### Power:

- 120 or 240 VAC, 50-60 Hz
- 25 watts maximum
- UL listed Class 2 power adapter

#### Dimensions:

- 1.75" x 19" x 6.5"  
(45mm x 483mm x 165mm)

#### Operating Temperature:

- 0 - 35°C (32 - 100°F)
- 0 - 90% relative humidity, non-condensing

#### Front Panel:

- Power LED
- Acknowledge (ACK) LED
- Error LED
- Serial Activity LED
- 8 Push buttons

#### Rear Panel:

- Programming Port DB-9M
- 1 Serial Port DB-9M
- Discrete Inputs DB-37F
- Power Barrel Connector

#### Serial Port:

- RS-232C
- 300 baud - 38.4 kbaud
- 7, 8 or 9 Data Bits
- 1 or 2 Stop Bits
- All parity types

#### Inputs:

- (16) TTL inputs, internally pulled up to +5 VDC, suitable for contact-closure operation. Trigger latency <1 frame.

#### Show Memory:

- 32 Kbyte EEPROM. Nonvolatile, robust memory retains show data permanently with no battery backup required.

### Fixtures

Fiber optics lighting advantages include the ability to locate light emitting fixtures in locations where traditional electric fixtures cannot be installed or in areas that are difficult or impossible to service. Because the illuminators can be mounted in a remote area and the fiber carries little or no heat, designers are free to create with fewer restrictions.

The popularity of fiber optics among designers include the color changing ability of fiber by the use of color filters, the special effects that can be produced through the use of color wheels, synchronous controllers and DMX systems.

SVA200 ACCENT LIGHT

SVA205 FLOODLIGHT

A flexible, powerful new uplight for landscaping and outdoor architectural use is a breakthrough in fiber optic technology. Never before have fiber optics been available with this level of lighting output. All the power of traditional lighting plus the benefits of fiber optics in a dynamic combination.

CATALOG NUMBER	DESCRIPTION	MATERIAL	CARTON QTY.	FIBER CAPACITY
SVA200	Flexible accent light	Plastic lens, black pvc body	1	75
SVA205	Flexible floodlight	Glass lens, black pvc body	1	150

### A205 Flood Lighting Installation Guide

1. Bring the cable through the unit.
2. Strip approximately 1" of the jacket of the cable and feed it through the fiber tight connector so the fibers protrude about .75" (19.05mm).
3. Tighten the fiber tight connector making sure the cable is snug and will not easily pull out.
4. Cut the fiber at the aluminum fiber reducer with a hot knife.
5. Re-attach the lens to the housing before you snap the housing back onto the knuckles.
6. The A205 is now ready for placement.

SVPAVER4X4

CATALOG NUMBER	DESCRIPTION	MATERIAL	FIBER CAPACITY
SVPAVER4X4	Inground paver light	Poly carbonate top and ABS base	25

### Paver Installation Guide

1. Thread the fibertight connector into the paver by rotating the paver around it.
2. Place the pavers firmly into the ground with the fiber optics attached and the coupler assembled. Lay bricks around the pavers.
3. Chisel out a notch in each paver that lays over the fibertight connector for the fiber optic cables.
4. Lay the chiseled brick over the fiber optic cable and connect the cable to a illuminator after the pavement is complete.

SVL300Kit	Light Stick Kit	6 Acrylic wands, pvc body	4-12
SVL300	Light Stick	1 Acrylic wand, pvc body	4-12
SVC40	Saw		

### Light Stick Installation Guide

1. Place light sticks firmly into the ground with the fiber optics attached and the coupler assembled. The top of the light stick should extend 2" above the final concrete grade.
2. Pour the concrete.
3. Finish the concrete.
4. When the concrete has set, cut the light stick flush at the concrete surface with a saw or a grinder. Use a sander to produce a smooth finish on the light stick.

SVL300

Acrylic Wand

The Fiber Optic Light Bar is a popular solution for edge lighting glass and acrylic, display cases or areas where traditional fixtures are difficult or impossible to install or service. Light bars provide high illumination without heat so they are ideal for confectionary, chocolate or cosmetic display cases, railing or under the cabinet lighting.

### LED'S

Most everyone is familiar with Light-Emitting-Diode (LEDs) from their use as indicator lights and numeric displays on consumer electronic devices and message boards. With improvements in LED materials and production, brighter, more efficient and more colorful LED's are now available which have moved the technology to a wide range of lighting applications.

LED's are solid-state semiconductor devices that convert electronic energy directly into light. LED's produce "cold" light which is very efficient because most the energy radiates in the visible spectrum. Incandescent, and to a lesser extent fluorescent lamps radiate energy in the non-visible spectrum creating heat as well as light.

By combining RGB (Red, Green, Blue) LED's, it is possible to create an entire spectrum of colors as well as white light - this is known as the "additive properties of light".

Color mixing is achieved by varying the voltages to each of the RGB color arrays. The controller for this color mixing may be either an external unit or it may be combined on or in the lighting unit itself.

LIGHT STRIP

JUMPER CABLE

POWER SUPPLY

MOUNTING CLIP

STARTER KIT

Flex-LED is a low voltage, flexible, monochromatic, LED strip designed specifically for illuminating channel or back-lit letters and logos. They are also well suited for linear lighting strips, architectural coves, display cases or other applications where an energy efficient light source is required. LEDs produce very little heat and have a lamp life expectancy of 100,000 hours (11 years) for red, clear-red, amber and orange - (6.8 yrs.) for white, green, and blue.

Features:

- Connect strips together via jumper cables
- 4 jumper sockets per strip for easy connection to other Flex-LED strips
- The Flex-LED strips can easily be cut every 3" (76mm)
- Bend radius: 1.5" (38mm)

The Flex-LED system:

1. The Flex-LED strip - available in 1 foot segments and 6 colors plus white
2. 12V power supply - available in a full range of wattage
3. Power/jumper cables to connect the strips together without solder!
4. Mounting clips for easy installation

Energy Efficient:

One 12" (305mm) red segment uses 1.5 watts per foot for red, clear red, amber and orange.  
2.8 watts per foot for white, green, and blue.

Maximum distance for power cable to Flex-Led strip is 30 feet (10 m).

Power supplies are available in ranges from 60 to 300 watts.

Standards:

- UL / cUL / ETL

IP Rating: 0

- Must be used with a UL approved Class 2 power supply

indoor/outdoor	under cabinet
signage	display cases
restaurants/bars	theaters/theme park

**NOTE: A quote will only be provided based on a layout sent at the time of the quote request.**

Endcaps terminate a section. Closed endcaps are sealed, open endcaps allow cable connection.

Snap on clip for easy mounting

Color options include:

- green
- amber
- red
- 5000K white (standard)
- red-orange
- blue
- 2800K white (special order 2-5wks.)

Tubular housing

Optional watertight fitting and cable strain relief for pass through cable can be installed on each end for attaching additional sections.

**BORDER LIGHT**

**Border Light** is a low voltage, flexible, monochromatic, LED strip designed specifically for illuminating channel or back-lit letters and logos. They are also well suited for linear lighting strips, architectural coves, display cases or other applications where an energy efficient light source is required. LEDs produce very little heat and have a lamp life expectancy of 100,000 hours (12 years) for red, clear-red, amber and orange - 60,000 hours for white, green, and blue.

**Energy Efficient:**

One 12" (305mm) red segment uses 1.5 watts per foot for red, clear red, amber and orange.  
2.8 watts per foot for white, green, and blue.

Maximum distance for power cable to Flex-Led strip is 30 feet (10 m).

Power supplies are available in ranges from 60 to 300 watts.

(tested to UL48)

**AVAILABLE TUBE COLORS**

LED FLOOD LIGHT FIXTURE

**Model Number:** EV213WS & EV213WS-CLR

**Dimensions:** 9.8" (250mm) x 2.6" (67mm) (without gland/cable connector)

**Fixture Diameter:** 10.23" (260mm) / designed for 9.8" (250mm) hole

**Depth:** 2.28" (58mm) plus Kopex connector.

**Glass:** 96 units with clear Flat tempered glass and 524 units with lenticular tempered glass lens (ribbed)

**Power supplies:** DMX enclosure or interface supplied shall be 220/240 VAC. DMX 512 controlled, DMX control card integrated in the power supply / DMX enclosure.

- Stainless Steel Housing
- Outdoor Installation
- Includes three mounting half turn clamps and fixed locking tab mechanism for each clamp.
- Tilt Degree to be controlled and adjusted using an adjustment screw mechanism
- DMX address switches secured under the cover
- Each fixture will have its own designated programming - addressable on site by programmer of choice.
- All cable shall be high rated shielded cable.
- The end of the cable will be provided without termination. Two XLR connectors and RJ45 connectors for each fixture shall be supplied separately.
- Each fixture shall be supplied with Kopex cable connector at the bottom

**Standards:**

- UL

**IP Rating:** 56

**SideGlow® cable**

Super Vision®'s beautifully designed illuminated step-nosing profiles offer the very best in step safety lighting systems.

A strong and durable system, it is constructed of a light alloy aluminum and anti-slip polymer treads and it uses LED's to illuminate and a special solid-core fiber optics nose strip.

The FL 201 system has an integrated LED downlighting strip for illumination of the step as well. However, if step down lighting is all that is needed then the LED-FloodStrip may provide the solution.

Both systems have an excellent tolerance for vibration, shock and repeated uses. They are ideal for existing steps or for new installations due to the simplicity of their design and installation requirements.

## FL102

**USES:** STEP WITH ILLUMINATED NOSING

**COLOR:** BLACK/SILVER

**LIGHT:** LED + MONOFIBER

- Light alloy profile black or silver anodized with anti-slip surface and housing for fasteners to step. and precision connector. Available in blue, white, green, red or yellow.
- Solid core optical fiber with optimized transmission for side viewing.
- Continuous diffusing lens manufactured in pure, fire retardant polycarbonate.
- Polymer insert for installation without carpet.
- Semi-rigid PVC cable cover.
- Deep engraved number plate (without miniature illuminator set). Only up to two digits or letters.
- Injection molded end plate

## FL201

**USES:** STEP ILLUMINATED NOSING & LED DOWNLIGHT

**COLOR:** BLACK/SILVER

**LIGHT:** LED + MONOFIBER

- Light alloy profile black or silver anodized with anti-slip surface and housing for fasteners to step.
- Miniature illuminator set with solid state lamp (12/ 24 VDC) and precision connector. Available in blue, white, green, red or yellow.
- Solid core optical fiber with optimized transmission for side viewing.
- Continuous diffusing lens manufactured in pure, fire retardant polycarbonate.
- Polymer insert for installation without carpet.
- Semi-rigid PVC cable cover.
- Deep engraved number plate (without miniature illuminator set). Only up to two digits or letters.
- Injection molded end plate

## FL301

**USES:** CORRIDORS, WALL TO CARPET, CARPET TO CARPET

**COLOR:** BLACK/SILVER

**LIGHT:** LED + MONOFIBER

- Light alloy profile black or silver anodized with anti-slip surface and housing for fasteners to step.
- Miniature illuminator set with solid state lamp (12/ 24 VDC) and precision connector. Available in blue, white, green, red or yellow.
- Solid core optical fiber with optimized transmission for side viewing.
- Continuous diffusing lens manufactured in pure, fire retardant polycarbonate.
- For installation and finished between two carpet finishes in floor and walls.
- For installation and finishes between one carpet and one wall.

CATALOG NUMBER	DESCRIPTION	CARTON QTY.
FL102	Step with illuminated nosing (Black/Silver) Light color-blue, white, green and yellow Power- 12 V or 24 VDC	1 foot
FL201	Step illuminated nosing & LED downlight (Black/Silver) Light color-blue, white, green and yellow Power- 12 V or 24 VDC	1 foot
FL301	Fiber LED light for corridors, wall to carpet, carpet to carpet (Black/Silver) Light color-blue, white, green and yellow Power- 12 V or 24 VDC	1 foot

**NOTE:** A quote will only be provided based on a layout sent at the time of the quote request.

**“LFL” with one line of high brightness has been designed for indirect or direct lighting, both for indoor and outdoor applications.**

**EVLFL FLOOD LIGHT FEATURES:**

- Low voltage, flexible, monochromatic, LED strip is designed specifically for illuminating the LED flood light strip and has an excellent tolerance for vibrations and shocks, quite different from neon and other forms of fluorescent lighting.
- Has an extremely low energy consumption and works with low voltage, thus minimizing the effects of corrosion and electrolysis.
- Outfitted with LED's powered at 24 or 12 VDC with a life expectancy of approximately 100,000 hours, corresponding to a normal use of 11 years.
- Ideal for direct lighting of building perimeters, as well as for steps, walk-ways, furniture, coves, kitchens, casinos, theme-parks, restaurants, bars, hotels, signage and much more.
