# 1 Monocarrier

## 1.1 Features

Unsurpassed Monocarrier, fruit of technology that has long been accumulated by NSK, is now available from standard stock. Light weight, compact single axis linear actuator, integrating the exceptionally reliable NSK's ball screw, linear guide, and support bearing.

### 4 Long term maintenance free

- Simultaneous use of NSK K1 lubrication unit and grease maintains smooth lubricating performance for long periods in mechanical environments where lubrication is difficult to apply.
- The simultaneous use of a small amount of grease and an NSK K1 lubrication unit provides sufficient lubrication effect in the environment where use of oil is not permitted because of hygienic issues or where the mechanical equipment requires high degree of washing out.
- NSK K1 lubrication unit is available for food processing machines and medical equipment.
- Grease for clean environments and for general machinery is available.

### 2 All-in-one structure

- The all-in-one structure, integrating a ball screw, a linear guide and support bearings into a unit, significantly reduces workload for design and installation.
- Multiple datum planes, the bottom and a lateral side of the rail, facilitate highly accurate installation.
- Immediate operation right after running-in is possible because grease has been previously packed at the plant.
- Ball screw lead is available in fine to high helix leads from a wide array of the product lineup.

### 3 Superb antirust capability

- Low temperature chrome plating is a standard feature for the bodies and sliders to control rusting in normal operating and storing environments. Fluoride low temperature chrome plating is optionally available for much higher rust prevention.

### 1 Light weight, compact design

- Available in two different shapes of cross-section, depending on application.  
Light weight type : MCM Series  
Rigid type : MCH Series  
The design fully utilizing given space facilitates compact structure.

Built in support bearings

Linear guide (Ball groove)

Slider

A ball nut and a slider are integrated into one component.

Ball screw

A wide variety of leads, from fine leads to high helix leads, is available.

### 1.4 Selection of Monocarrier

#### 1.4.1 Procedures for selecting Monocarrier

Select a reference type of Monocarrier based on stroke and rigidity (Refer to Fig. 1-6, 1-7).

Select a ball screw lead referring to "1.4.3 Maximum Rotational Speed" so that the rotational speed does not exceed the limit.

Study the loads to be applied to the linear guide and obtain the equivalent load  $F_e$  substituting them for equation ① or ② on Page C13. Obtain the mean effective load  $F_m$  substituting them for equation ③ on Page C14, then calculate the life.

Notes ● Basic dynamic and static load ratings indicate the values for one slider. ● Basic dynamic load rating of the linear guide is the load of perpendicular direction to the axis that allows 90% of a group of the same Monocarriers to operate "Rated running distance" in the table, that is equivalent to 1 million revolutions of the ball screw and the support unit, under the same condition without causing flaking by rolling contact fatigue. ● Basic dynamic load rating of the ball screw is a load to axial direction that allows 90% of ball screws of a group of the same Monocarriers to rotate 1 million revolutions under the same condition without causing flaking by rolling contact fatigue. ● Basic dynamic load rating of the support unit is a constant load to axial direction that allows 90% of support units of the same group of Monocarriers to rotate 1 million revolutions under the same condition without causing flaking by rolling contact fatigue. ● Basic static load rating is a load that results in combined permanent deformations at the contact points of balls and ball grooves of respective parts is 0.01% of the diameter.

● Basic static moment of double slider is a value when two sliders equipped with NSK K1 are butted against each other.  
 ● The basic static moment is the value when a rolling contact pressure of balls exceeds 4000 N/mm<sup>2</sup>.  
 ● If you require to apply extremely heavy load, please consult NSK for estimation of fatigue life.

Notes ● Basic dynamic and static load ratings indicate the values for one slider. ● Basic dynamic load rating of the linear guide is the load of perpendicular direction to the axis that allows 90% of a group of the same Monocarriers to operate "Rated running distance" in the table, that is equivalent to 1 million revolutions of the ball screw and the support unit, under the same condition without causing flaking by rolling contact fatigue. ● Basic dynamic load rating of the ball screw is a load to axial direction that allows 90% of ball screws of a group of the same Monocarriers to rotate 1 million revolutions under the same condition without causing flaking by rolling contact fatigue. ● Basic dynamic load rating of the support unit is a constant load to axial direction that allows 90% of support units of the same group of Monocarriers to rotate 1 million revolutions under the same condition without causing flaking by rolling contact fatigue. ● Basic static load rating is a load that results in combined permanent deformations at the contact points of balls and ball grooves of respective parts is 0.01% of the diameter.

**1.4.7 Estimation of Life Expectancy**  
**1.4.7.1 Life of Linear Guide**

Study the load to be applied to the linear guide of Monocarrier (Fig. 1-10). The equivalent load ( $F_e$ ) is determined by substituting the load for equation ① (Eq.② : in case of the tightly coupled double slider type).

● In case of the single slider

$$F_e = Y_H F_H + Y_V F_V + Y_R \mathcal{E}_R M_R + Y_P \mathcal{E}_P M_P + Y_Y \mathcal{E}_Y M_Y \dots \text{①}$$

● In case of the double slider

$$F_e = \frac{Y_H F_H}{2} + \frac{Y_V F_V}{2} + Y_R \mathcal{E}_{Rd} M_R + Y_P \mathcal{E}_{Pd} M_P + Y_Y \mathcal{E}_{Yd} M_Y \dots \text{②}$$

- $F_H$  : Lateral direction load acting on the slider (N)
- $F_V$  : Vertical direction load acting on the slider (N)
- $M_R$  : Rolling moment acting on the slider (N · m)
- $M_P$  : Pitching moment acting on the slider (N · m)
- $M_Y$  : Yawing moment acting on the slider (N · m)

- $\mathcal{E}_{Rr}$   $\mathcal{E}_{Rd}$  : Dynamic equivalent coefficient to rolling moment
- $\mathcal{E}_{Pr}$   $\mathcal{E}_{Pd}$  : Dynamic equivalent coefficient to pitching moment
- $\mathcal{E}_{Yr}$   $\mathcal{E}_{Yd}$  : Dynamic equivalent coefficient to yawing moment

Refer to Table 1-15 about Dynamic equivalent coefficient.

- $Y_H$   $Y_V$   $Y_R$   $Y_P$   $Y_Y$  : 1.0 or 0.5

At equations ① and ② for obtaining equivalent load  $F_e$ , among  $F_H$ ,  $F_V$ ,  $\mathcal{E}_P M_P$ ,  $\mathcal{E}_R M_R$ ,  $\mathcal{E}_Y M_Y$ , the maximum load is assumed to be 1.0, and others are to be 0.5.

Figures in parentheses( ) are Dynamic equivalent coefficient in case of the Monocarrier without NSK K1.

**Fig. 1-10 Direction of load**

In case when the load acting on the slider may fluctuate (In general,  $M_p$ ,  $M_y$  may fluctuate with the acceleration/deceleration of slider), the mean effective load is determined by Eq. ③.

**Fig. 1-11 Stepwise Fluctuating Load**

- Travelling distance under the equivalent load  $F_{e1}$  :  $L_1$
- Travelling distance under the equivalent load  $F_{e2}$  :  $L_2$
- Travelling distance under the equivalent load  $F_{en}$  :  $L_n$

$$F_m = \sqrt[3]{\frac{1}{L} (F_{e1}^3 L_1 + F_{e2}^3 L_2 + \dots + F_{en}^3 L_n) \dots \text{③}}$$

- $F_m$  : Mean effective load of fluctuating loads
- $L$  : Total travelling distance

The life of linear guide is calculated by Eq. ④

$$L = L_a \times \left[ \frac{C}{f_w \cdot F_m} \right]^3 \dots \text{④}$$

- $L$  : Life of linear guide (km)
- $F_m$  : Mean effective load acting on the linear guide (N)
- $C$  : Basic dynamic load rating of the linear guide (N)
- $L_a$  : Travelling distance (km)
- $f_w$  : Load factor (Refer to Table 1-16)

When the estimated life does not clear the required life, the life of linear guide is to be calculated again after the following measures are taken:

1. Change from the single slider type to double slider type.
2. Use a larger size Monocarrier.

**1.4.7.2 Life of Ball Screw (Support unit)**

The mean effective load is determined from the axial loads. For calculation of the mean effective load, use Eq.③. The life of ball screw is calculated by Eq. ⑤.

$$L = R \times \left[ \frac{C_a}{f_w \cdot F_m} \right]^3 \times 10^6 \dots \text{⑤}$$

- $l$  : Lead of ball screw (mm)
- $L$  : Life of ball screw (mm)
- $C_a$  : Basic dynamic load rating of the ball screw (N)
- $F_m$  : Mean effective load acting on the ball screw (N)
- $f_w$  : Load factor (Refer to Table 1-16)

The life of support unit is calculated by Eq. ⑤. If the life of ball screw / support unit does not clear the required life, use a larger size Monocarrier. Upon calculations as mentioned above, selection of Monocarrier completed.

**Table 1-16 Values of load factor  $f_w$**

Operating conditions	Load factor $f_w$
At smooth operation with no mechanical shock	1.0~1.2
At normal operation	1.2~1.5
At operation with mechanical shock and vibrations	1.5~3.0

### 1.4.8 Example of Life Estimation

This section offers an example how to estimate the life of Monocarrier based on the life of each component.

Fig. 1-12

1. Use condition

- Stroke : 600mm
- Maximum Speed : 1000mm/s
- Load Mass : W=10kg
- Acceleration : g=9.8m/s<sup>2</sup>
- Setting Position : Horizontal
- Operating Profile : See above figure

2. Selection of Nominal size

2-1. Interim Selection

Firstly, select a greater ball screw lead as the maximum speed is 1000 mm/s. The interim selection is MCM06060H20K00, a single slider specification MCM06 that has 600 mm stroke, as the stroke is 600 mm.

3. Calculation

3-1. Linear guide

3-1-1. Fatigue life

Multiply the result of the Eq. ① by the dynamic equivalent coefficient (Table 1-15. single slider) to convert the load volume. From above operation profile,

- i) Constant speed  $F_{e1} = Y_v F_v = Y_p W_g = 1 \cdot 10 \cdot 9.8 = 98\text{N}$
- ii) Accelerating  $F_{e2} = Y_v F_v + Y_p \varepsilon_p M_p = 0.5 \cdot 10 \cdot 9.8 + 1 \cdot 65.1 \cdot 0.1 \cdot 100 = 700\text{N}$
- iii) Decelerating  $F_{e3} = Y_v F_v + Y_p \varepsilon_p M_p = 0.5 \cdot 10 \cdot 9.8 + 1 \cdot 65.1 \cdot 0.1 \cdot 100 = 700\text{N}$

Mean effective load  $F_m$

$$F_m = \sqrt[3]{\frac{1}{L} (F_{e1}^3 \cdot L_1 + F_{e2}^3 \cdot L_2 + F_{e3}^3 \cdot L_3)}$$

$$= \sqrt[3]{\frac{1}{600} (98^3 \cdot 500 + 700^3 \cdot 50 + 700^3 \cdot 50)}$$

$$= 387\text{N}$$

$$L = \left( \frac{C}{f_w \cdot F_m} \right)^3 \times L_a$$

$$= \left( \frac{15900}{1.2 \cdot 387} \right)^3 \times 20$$

$$= 8.02 \times 10^5 \text{km}$$

3-1-2. Static safety factor ; Divide the basic static load rating by the maximum load.

$$F_s = \frac{C_0}{F_e} = \frac{C_0}{F_{e2}} = \frac{17000}{700} = 24.2$$

3-2. Ball screw

3-2-1. Fatigue life ; Obtain the axial load of each stage of operation referring to the operation profile, then calculate the mean load.

By the process above,

- i) Constant speed  $F_{e1} = \mu \cdot W \cdot g = 0.01 \cdot 10 \cdot 9.8 = 0.98$
- ii) Accelerating  $F_{e2} = F_{e1} + W\alpha = 101\text{N}$
- iii) Decelerating  $F_{e3} = F_{e1} - W\alpha = 99\text{N}$

Axial mean effective load  $F_m$

$$F_m = \sqrt[3]{\frac{1}{L} (F_{e1}^3 \cdot L_1 + F_{e2}^3 \cdot L_2 + F_{e3}^3 \cdot L_3)}$$

$$= \sqrt[3]{\frac{1}{600} (0.98^3 \cdot 500 + 101^3 \cdot 50 + 99^3 \cdot 50)}$$

$$= 55\text{N}$$

$$L = \left( \frac{C_a}{f_w \cdot F_m} \right)^3 \times \ell \times 10^6$$

$$= \left( \frac{4560}{1.2 \cdot 55} \right)^3 \times 20 \times 10^6 \text{(mm)}$$

$$= 6.5 \times 10^6 \text{km}$$

3-2-2. Static safety factor ; Divide the basic static load rating by the maximum axial load.

$$F_s = \frac{C_{0a}}{F_e} = \frac{C_{0a}}{F_{e2}} = \frac{7750}{101} = 76.7$$

3-2-3. Maximum rotational speed ; According to the table of maximum rotational speed on page C7, MCM06 with 20 mm lead and 600 mm stroke, is possible to operate under the maximum speed of 1000 mm/s.

3-3. Support unit

3-3-1. Fatigue life ; Use the axial load  $F_m = 55\text{N}$ , that is the result of above calculation 3-2-1.

$$L = \left( \frac{C_a}{f_w \cdot F_m} \right)^3 \times \ell \times 10^6 = \left( \frac{6550}{1.2 \cdot 55} \right)^3 \times 20 \times 10^6 \text{(mm)}$$

$$= 1.95 \times 10^7 \text{km}$$

3-3-2. Static safety factor ; Divide the limit load by the maximum axial load.

$$F_s = \frac{C_{0a}}{F_e} = \frac{C_{0a}}{F_{e2}} = \frac{2730}{101} = 27.0$$

3.4. Result

MCM06060H20K00	Linear guide	Ball screw	Support unit
Fatigue life	8.02 × 10 <sup>5</sup> km	6.5 × 10 <sup>6</sup> km	1.95 × 10 <sup>7</sup> km
Static safety factor	24.2	76.7	27.0

The shortest fatigue life of linear guide among the components must be taken as the life of the Monocarrier. The interim selection of MCM06060H20K00, that is chosen based on the use conditions, satisfies the required life.

## 1.5 Maintenance

### 1.5.1 Maintenance Method

1. For standard Monocarrier, we pack grease in slider, linear guides and ball screw.
2. The Monocarriers equip with NSK K1 lubrication unit as a standard feature, and therefore, you can operate it for 5 years or 10 000 km, whichever comes first, without the maintenance. However replenishment of preceded grease may extend its life substantially.
3. NSK K1 lubrication unit demonstrates its effects in environment where oily dust exists. However, the life may be shorter than the case described in the Clause 2 above. In such a case, it requires the measures such as increasing the frequency of replenishment.

4. Nozzle for NSK grease gun exclusive for MCH Monocarriers is available as an option.

NSK reference number : NSK HGP NZ8

Fig. 1-13 NSK HGP NZ8

### Precautions for handling

1. Please consult with NSK when the motor is coupled to the ball screw using a pulley because there is a restriction on allowable torque to the end of ball screw shaft.
2. To extend high performance of NSK K1 lubrication unit, please observe the following.

- |                      |   |      |
|----------------------|---|------|
| 1. Temperature range | Ambient temperature :   | 50°C |
|                      | Max. instantaneous temperature :  | 80°C |
| 2. Use of chemicals  | Never leave a Monocarrier in close proximity of grease removing organic solvents such as hexane or thinner. Never immerse it in an antirust solvent that contains kerosene. |      |

Note: Other oils, such as water-based and oil based cutting oil, and grease do not cause any problems.

### 1.5.2 NSK K1™ Lubricant Unit

#### ● NSK K1 lubrication unit for food processing is available.

For safety equipment of food processing and medical care, NSK provides the Monocarrier equipped with special NSK K1 lubrication unit that is made of compatible material with FDA regulations.

Dimensions are the same as the standard NSK K1 lubrication unit, and special handling care is not required.

### 1.6 NSK Clean Grease LG2 Specification

#### ● Features

This grease was developed by NSK to be exclusively used for linear guides and ball screws in clean rooms. Compared to the fluoride grease which are commonly used in clean rooms, LG2 has several advantages such as: Higher in lubrication function, Longer lubrication life, More stable torque (resistant to wear), Higher rust prevention. In dust generation, LG2 is more than equal to fluoride grease in keeping dust volume low. Since the base oil is not a special oil but a mineral oil, LG2 can be handled in the same manner as general grease.

#### ● Applications

LG2 is lubrication grease for rolling contact machine components such as linear guides and ball screws for processing equipment for semiconductors and LCD which require highly clean environment at normal pressure at normal temperatures. It cannot be used in a vacuum environment.

#### ● Nature

### 1.7 Characteristics and Evaluation Method

#### 1.7.1 Positioning Accuracy

Perform positioning successively from the reference position in a specific direction. Measure the difference between the actual and desired travel distances for each point from the reference position. Repeat this measurement seven times to determine the average value. Measure such average value almost over the entire travel distance at the intervals specified for each model and take the maximum difference of the average values determined at respective positions as the measured value.

Fig. 1-16

#### 1.7.2 Repeatability

Repeat positioning at any point seven times from the same direction to measure the stopping position and determine one half of the maximum difference of readings. Repeat this measurement almost over the entire travel distance at the intervals specified for each model. Take the maximum difference of the determined values as the measured value. Express one half of the maximum difference with a plus-or-minus (±) sign.

## 3.2 MCH Series dimension table of standard products

### MCL06

Accuracy grade: High grade (H)

- The rail of MCL 06 is made lighter than that of MCH 06 by lowering the rail height. The weight ratio between the MCH 06 and MCL 06 is 5 to 4.
- Double slider specification is also available for the MCL 06.
- Combinations of stroke and ball screw lead of the MCL 06 are the same as those of the MCH 06.
